

Annual Report

Tom Hay Reserve 2017-18

www.tasland.org.au

Introduction

The Tasmanian Land Conservancy (TLC) protects important natural areas as permanent reserves and aims to demonstrate excellence in reserve management for biodiversity conservation. The TLC has adopted an adaptive management framework – the Open Standards for the Practice of Conservation which comprises– planning, implementing, monitoring, reporting, review/adapt and communication.

The Tom Hay Reserve was gifted to the TLC in 2015 after it was subdivided from the adjacent property. The Reserve is only 0.3ha in size but adjoins the Rat Bay Conservation Area and several other private conservation reserves providing a pivotal corridor for threatened species such as the forty spotted pardalote, swift parrot and eastern quoll and a refugia for other wildlife on the island.

The management of the Reserve is guided by the Tom Hay Conservation Statement with works implemented by TLC staff through an Annual Work Plan and Monitoring Plan. Details of ecological monitoring methods can be found on www.tasland.org.au.

This report describes progress made towards delivery of the management plan in 2017-18, and is divided into three sections:

- 1. Reserve Scorecard a table summarising the results of management effectiveness and ecological monitoring to date;
- 2. Management Effectiveness Summary providing details of the implementation of key management strategies and making recommendations for plan improvement;
- 3. Ecological Monitoring Summary providing details of the status of conservation targets and trends of key ecological indicators

The recommendations made in this report are used to adapt and improve management of the Reserve, update the management plan, and revise work and monitoring plans for the coming year. Key findings of this report are communicated to TLC Board, supporters and other stakeholders.

Monitoring Comments	Indicator	Status 2016 17	Status 2017 18 Trand
Monitoring Summary	Indicator	Status 2016-17	Status 2017-18 Trend
Dry forest and woodland	General Condition	Good condition	Good condition
Feral cat detections	Cat activity	0 0 detections / 35 trap nights	0 0 detections / 28 trap nights
Terrestrial mammals	Species richness	4 native species	5 native species
		0 introduced species	0 introduced species
	Proportion native species	1	1
	Native species diversity indices	Simpsons 0.41	Simpsons 0.68
		Shannon-Wiener 0.78	Shannon-Wiener 1.29
Management Strategy	Indicator	Status 2016-17	Status 2017-18 Trend
Site Intactness and neighbour liasion	Weed invasion	No invasion noted	No change
	Wood removal	No evidence	No change
	Litter or rubbish dumping	No evidence	No change
	Sensitive site intact	No disturbance	No change
	Neighbour liason	Regular and ongoing	Stable

Tom Hay Reserve Scorecard 2017-18

Monitoring Summary

Dry Forest and Woodland		Status: Very Good	
Goal:		Outcome: On Track	
Maintain the condition woodland	n of the forest and		
Target Description:		Dry forest monitoring site Dec 20	17 Photo S Bryant
The Tom Hay Reserve is dominated by black peppermint (<i>E. amygdalina</i>) with white gum (<i>E. viminalis</i>) and white peppermint (<i>E. pulchella</i>) as occasional sub-dominant canopy species. Understorey trees and tall shrubs include bull- oak, native hop, she-oak, banksia, drupe bush, native cherry and coast beard heath. The ground layer is diverse and dominated by shrubs and sedges, including grasstrees (<i>Xanthorrhoea australis</i>). No weeds were located on the Reserve and the native vegetation is in excellent condition. DAS is listed as vulnerable under the Tasmanian <i>Nature Conservation Act 2002.</i>			
A long term monitoring s photos is at the steel peg			
Target	Indicator	2016-17	2017-18 Trend
Dry forest and woodland	General condition	Good condition	No change
Feral cat detections	Cat activity	0 Odetections / 35 trap nights	0 - 0 detections / 28 trap nights
Terrestrial mammals	Species richness	4 native species	5 native species
		0 introduced species	0 introduced species
	Proportion native species	1	1

Key findings in 2017-18

• Repeat site images were collected on the Reserve in Nov – Dec 2017.

Native species diversity

indices

• The vegetation community remains in good ecological condition though dry climate period.

Simpsons 0.41

Shannon-Wiener 0.78

Simpsons 0.68

Shannon-Wiener 1.29

- One camera trap was installed near the sensitive site for mammal monitoring in Nov 2017.
- Eastern quoll, potoroo, Bennetts wallaby, brushtail possum and Tas pademelon (new) were recorded with multiple diggings observed across the site
- No feral cats were detected

Recommendations

- Repeat fauna camera monitoring in 2018-19 and photo from boundary peg.
- Report any cat detections to the BI Cat Management Program

Management Effectiveness Summary

Site intactness and neighbour liaison

Key objective(s)

• The site remains intact and neighbour relations maintained

Strategy description

The Tom Hay Reserve will be assessed for key indicators during the annual reserve inspection to ensure the site remains ecologically intact, no physical disturbance has occurred and there is ongoing evidence of the areas ecological robustness in the surrounding region. Maintaining good relations with the previous owners is essential to ensure security and private access to the site is maintained and the sensitive site remains untouched and protected.

Status 2017-18

Visitor to the Tom Hay Reserve. Photo TLC camera

Indicator	Status 2016-17	2017-18 Trend
Weed invasion	No invasion noted	No change
Wood removal	No evidence	No change
Litter or rubbish dumping	No evidence	No change
Sensitive site intact	No disturbance	No change
Neighbour liasion	Regular and ongoing	No change

Progress in 2017-18

- Site inspection on Nov 2017 by S Bryant with camera and site photos collected.
- Reserve condition remains good but dry and low rainfall
- No weeds detected
- No evidence of wood cutting
- No evidence of fire or rubbish dumping
- No sign of new tracks or other disturbance events were noted
- A database of site photos and other notes are being maintained on the TLC Server
- Communication is ongoing with the neighbouring property owners through TLC events and engagements

Key recommendations for future management

- Maintain good communication with the donors and adjacent landholders.
- No TLC signage or fencing is to be erected.
- Maintain the boundary photo every three years from the steel boundary peg.
